

Finnish Chemical Magazine volumes to chemistry students

Become a sponsor!

Accomplished high school students and high school graduates have been awarded a volume of Finnish Chemical Magazine (Kemia-lehti) for six years now. So far, over 4,700 students have been thus acknowledged for their chemistry performance.

In 2019, also university students will be awarded the same way

For the first time, the magazine awards are now open for university and college chemistry students, too.

Companies and organisations are invited to become sponsor partners.

A Finnish Chemical Magazine volume provides future professionals current information on opportunities and employers in the

field. The sponsors, on the other hand, may find future employees through their sponsorship.

You can choose the sponsorship amount freely. The minimum amount is 3,000 euros, which equals a gift volume to 60 students.

As a sponsor partner you receive:

- Advertisement space in Finnish Chemical Magazine publications for the amount of your sponsorship donation.
- Your logo in a 1/1 p. advertisement in which the sponsors are presented. The advertisement will be published in the special ChemBio Finland issue 2/2019.
- Good publicity among chemistry students.
- Good publicity in news items in which the scholarship campaign and the sponsors will be covered.

Join the campaign until January 15, 2019.
You are most welcome as a sponsor!
